### 1. NAMES and IDENTIFICATION

- a) Preferred name of language for code element denotation:  
Wadi Wadi
- b) Autonym (self-name) for this language:
- c) Common alternate names and spellings of language, and any established abbreviations:  
Wathiwathi (wathi = no), Watthiwatthi, Wattewatte, Watty-watty, Wotti-wotti, Withaija, Wohdi Wohdi, Woani (means 'man'), Woonyi, Dacournditch (horde between Tyntynder and Swan Hill), Biangil (place name Piangil).
- d) Reason for preferred name:  
Both AIATSIS, Clark and Dr. Bowern list the language name as such.
- e) Name and approximate population of ethnic group or community who use this language (complete individual language currently in use):  
A language of the Australian state Victoria. According to AUSTLANG, the National Indigenous Language Survey of 2004 estimated there were less than 10 speakers. It is not to be confused with the Thurawal dialect Wadiwadi.
- f) Preferred three letter identifier, if available: xdw

Your suggestion will be taken into account, but the Registration Authority will determine the identifier to be proposed. The identifier is not intended to be an abbreviation for a name of the language, but to serve as a device to identify a given language uniquely. With thousands of languages, many sets of which have similar names, it is not possible to provide identifiers that resemble a language name in every case.
