ISO 639-3 Registration Authority
Request for Change to ISO 639-3 Language Code
Change Request Number: 2015-052 (completed by Registration authority)

Date: 2015-7-19
Primary Person submitting request: Janel J. Swenson
Affiliation: SIL Nepal
E-mail address: janel underscore swenson at sil dot org

Names, affiliations and email addresses of additional supporters of this request:
[Warren and Jessie Glover, SIL; email: warren_glover at sall dot com, jessie_glover at sall dot com;
Daniel Watters, SIL Nepal Director; email: director_nepal at sil dot org]

Postal address for primary contact person for this request (in general, email correspondence will be used):
Janel Swenson, GPO 8975 UPC 1588, Kathmandu NEPAL

PLEASE NOTE: This completed form will become part of the public record of this change request and the history of the ISO 639-3 code set and will be posted on the ISO 639-3 website.

Types of change requests

This form is to be used in requesting changes (whether creation, modification, or deletion) to elements of the ISO 639 Codes for the representation of names of languages — Part 3: Alpha-3 code for comprehensive coverage of languages. The types of changes that are possible are to 1) modify the reference information for an existing code element, 2) propose a new macrolanguage or modify a macrolanguage group; 3) retire a code element from use, including merging its scope of denotation into that of another code element, 4) split an existing code element into two or more new language code elements, or 5) create a new code element for a previously unidentified language variety. Fill out section 1, 2, 3, 4, or 5 below as appropriate, and the final section documenting the sources of your information. The process by which a change is received, reviewed and adopted is summarized on the final page of this form.

Type of change proposed (check one):

1. ☐ Modify reference information for an existing language code element
2. ☐ Propose a new macrolanguage or modify a macrolanguage group
3. ☐ Retire a language code element from use (duplicate or non-existent)
4. ☒ Expand the denotation of a code element through the merging one or more language code elements into it (retiring the latter group of code elements)
5. ☐ Split a language code element into two or more new code elements
6. ☐ Create a code element for a previously unidentified language

For proposing a change to an existing code element, please identify:

Affected ISO 639-3 identifier: gvr
Associated reference name: Western Gurung
1. Modify an existing language code element

(a) What are you proposing to change:
   - Language reference name; generally this is changed only if it is erroneous;
   - if usage is shifting to a new preferred form, the new form may be added (next box)
   - Language additional names
   - Language type (living, extinct, historical, etc.)
   - Language scope (individual language or macrolanguage)

(b) What new value(s) do you propose:

(c) Rationale for change:

2. Propose a new macrolanguage or modify a macrolanguage group

(a) For an existing Macrolanguage, what change to its individual language membership do you propose:

(b) Rationale for change:

For a new Macrolanguage proposal, please also complete the form “Request for New Language Code Element in ISO 639-3” (file name “ISO639-3_NewCodeRequest.doc” or “ISO639-3_NewCodeRequestForm.rtf”), which must also be submitted to fully document the intended meaning for the new macrolanguage.

3. Retire a language code element from use

(a) Reason for change:
   - There is no evidence that the language exists.
   - This is equivalent to another ISO 639-3 language.

(b) If equivalent with another code element, with which ISO 639-3 code element (identifier and name) is it equivalent:

(c) Rationale for change:

4. Expand the denotation of a code element through merging of one or more code elements

(a) List the languages (identifier and name) to be merged into this code element and retired from use:
   Eastern Gurung [ggn] should be merged with Western Gurung [gvr] and listed as one language, "Gurung." (Note from the researcher: the original ISO code was [gvr], [ggn] was added after 1974.)

(b) Rationale for change
   Intelligibility of a central variety is adequate throughout the Gurung-speaking area, lexical similarity

Request for Change to ISO 639-3 Language Code, page 2
results do not confirm they are different languages, strong cohesive ethnolinguistic identity may be seen, and strong desires by the community to be represented as one language community have been expressed.

5. Split a language code element into two or more code elements

(a) List the languages into which this code element should be split:

By the language identification criteria set forth in ISO 639-3, the simple fact of distinct identities is not enough to assign separate identifiers. The criteria are defined in the standard as follows:

For this part of ISO 639, judgments regarding when two varieties are considered to be the same or different languages are based on a number of factors, including linguistic similarity, intelligibility, a common literature (traditional or written), a common writing system, the views of users concerning the relationship between language and identity, and other factors. The following basic criteria are followed:

- Two related varieties are normally considered varieties of the same language if users of each variety have inherent understanding of the other variety (that is, can understand based on knowledge of their own variety without needing to learn the other variety) at a functional level.
- Where intelligibility between varieties is marginal, the existence of a common literature or of a common ethnolinguistic identity with a central variety that both understand can be strong indicators that they should nevertheless be considered varieties of the same language.
- Where there is enough intelligibility between varieties to enable communication, the existence of well-established distinct ethnolinguistic identities can be a strong indicator that they should nevertheless be considered to be different languages.

(b) Referring to the criteria given above, give the rationale for splitting the existing code element into two or more languages:

(c) Does the language code element to be split represent a major language in which there already exists a significant body of literature and research? Are there contexts in which all the proposed separate languages may still be considered the same language—as in having a common linguistic identity, a shared (or undistinguished) body of literature, a written form in common, etc.? If so, please comment.

In order to complete the change request, the form “Request for New Language Code Element in ISO 639-3” (file name “ISO639-3_NewCodeRequestForm.doc” or “ISO639-3_NewCodeRequestForm.rtf”) must also be submitted for each new identifier that is to be created. That step can be deferred until this form has been processed by the ISO 639-3 registrar.

6. Create a new language code element

(a) Name of missing language:
(b) State the case that this language is not the same as or has not been included within any language that already has an identifier in ISO 639-3:

In order to complete the change request, the form “Request for New Language Code Element in ISO 639-3” (file name “ISO639-3_NewCodeRequest.doc” or “ISO639-3_NewCodeRequestForm.rtf”) must also be submitted to more fully document the new language.

Sources of information
Please use whichever of the points below are relevant in order to document the sources on which you have based the above proposal.

(a) First-hand knowledge. Describe:
Results from a survey of Eastern and Western Gurung done in Sept.-Oct. 2014 revealed evidence they are one language (with some dialect variation): RTT scores ranging 78-86% indicate adequate comprehension of a central variety (the far eastern and far western edges were included in the administration of the RTT), lexical similarity results ranging 64-86% did not confirm they are different languages, dialect mapping sessions and community led discussions revealed strong cohesive ethnolinguistic identity and strong desires to be represented as one group, personal interviews further confirmed a strong cohesive ethnolinguistic identity. 5 sites were chosen as test sites for RTT/questionnaires in four different districts. Dialect Mapping was done with five villages in five different districts with an additional Dialect Mapping session with representatives from six different districts present. (Only the northernmost Gurung-speaking district was not represented in the results of survey due to the small population of speakers there.) In each session, members consistently expressed 1) all Gurungs can understand each other, 2) variation exists among different regions of the Gurung speaking area (a dialect chain), and 3) they wish to be identified as one language group with one ethnic identity.

(b) Knowledge through personal communication. Describe:
Personal observations, communications with community members, and communication with our language helper who traveled to most sites with us, all confirmed the results of our survey tools.

(c) Knowledge from published sources (please give complete bibliographical references):
Survey report publication in process; http://www.sil.org/resources/archives/62050

The change proposal process
A request to change the code set goes through a six-step process:

1. A user of ISO 639-3 proposes a change and submits it to the ISO 639-3 Registration Authority (ISO 639-3/RA) using this form.

2. The ISO 639-3 registrar processes the change request to verify that the request is compatible with the criteria set forth in the standard and to ensure that the submitter has supplied all necessary information. This may involve rounds of interaction with the submitter.
3. When the change request proposal is complete in its documentation (including all associated New Code Requests), the change request is promoted to “Proposed Change” status and the ISO 639-3 registrar posts the request on the official web site of the ISO 639-3/RA. Also at this time, an announcement is sent to anyone requesting notification of new proposals matching their specified criteria (region and/or language family of interest). Periodically, a message maybe sent to the general LINGUIST discussion list on Linguist List (http://linguistlist.org/issues/index.html), and other appropriate discussion lists, inviting individuals to review and comment on pending proposals. Anyone may request from the ISO 639-3 registrar to receive notification regarding proposals involving languages in a specific region of the world or specific language family.

4. Individuals may send comments to the ISO 639-3 registrar for compilation. The consensus of early reviews may result in promotion to “Candidate Status” (with or without amendment), or withdrawal of the change request, if the conclusion is that the request is not in keeping with the stated criteria of the ISO 639-3 standard.

5. Three months prior to the end of the annual cycle of review and update, a new notice is posted on the official web site of the ISO 639-3/RA, and an announcement listing the Candidate Status Change Requests is posted to the LINGUIST discussion list and other discussion lists, as requested by their owners. All change requests are then open to further review and comment by any interested party for a period of three months. A Change Request received after the start of Candidacy phase must wait until the next annual cycle for consideration. The purpose of this phase is to ensure that a minimum of three months is allotted for the review of every proposal.

6. At the end of the formal review period, a given Change Request may be: 1) adopted as a whole; 2) adopted in part (specific changes implicit in the whole Change Request may be adopted separately); 3) rejected as a whole; or 4) amended and resubmitted for the next review cycle. All change requests remain permanently archived at the official web site of the ISO 639-3/RA.
